

# Seed Fill Augers for Kinze Twin Line Planters

Kasco's hydraulic-powered, dual cross auger system mounts permanently on Kinze's Twin Line planter, to quickly fill both rows of boxes. With Kasco's system, you can now fill the seed boxes in about 10 minutes.

Each auger is equipped with a hopper at one end, as well as lengths of flexible tubing that run to each seed box. The augers are powered by independent hydraulic outlets on the planter's control box and are activated by opening a valve.

Each cross auger is equipped with flexible joints that allow it to flex with the planter according to the terrain.

An optional vertical auger is available.
